Dee Unglaub Silverthorn studied biology as an undergraduate at Newcomb College of Tulane University, where she did research on cockroaches. For graduate school she switched to studying crabs and received a Ph.D. in marine science from the Belle W. Baruch Institute for Marine and Coastal Sciences at the University of South Carolina. Her research interest is epithelial transport, and most recently work in her laboratory has focused on transport properties of the chick allantoic membrane. Her teaching career started in the Physiology Department at the Medical University of South Carolina but over the years she has taught a wide range of students, from medical and college students to those still preparing for higher education. At the University of Texas-Austin she teaches physiology in both lecture and laboratory settings, and instructs graduate students on developing teaching skills in the life sciences. She has received numerous teaching awards and honors, including a 2011 UT System Regents' Outstanding Teaching Award, the 2009 Outstanding Undergraduate Science Teacher Award from the Society for College Science Teachers, the American Physiological Society's Claude Bernard Distinguished Lecturer and Arthur C. Guyton Physiology Educator of the Year, and multiple awards from UT-Austin, including the Burnt Orange Apple Award. The first edition of her textbook won the 1998 Robert W. Hamilton Author Award for best textbook published in 1997-98 by a University of Texas faculty member. Dee was the president of the Human Anatomy and Physiology Society in 2012-13, has served as editor-in-chief of *Advances in Physiology Education*, and is currently chair of the American Physiological Society Book Committee. She works with members of the International Union of Physiological Sciences to improve physiology education in developing countries, and this book has been translated into seven languages. Her free time is spent creating multimedia fiber art and enjoying the Texas hill country with her husband, Andy, and their dogs.

Clear and concise text. Well written, easy to understand. if you are the type of student who

appreciates well composed textbooks then this book is for you. visual aides are amazing and the diagrams make everything that much more clear to understand. visualizing concepts is a breeze.

Received as expected. This is loose leaf.

Good book with step by step diagrams. Comes with the Mastering A&P code for the online work so best price by far. The physical textbook is also nice to have when the website is being wonky.

Excellent product!!! I would buy again for sure!!!!

Overpriced, online program is somewhat beneficial but the time you need to dedicate to it doesn't pay off in knowledge value. It's worth doesn't match it's price.

Good book, but I should have taken another instructor. The instructor was lazy in explaining key information. This book took the place of the instructor insipid lectures.

This is the perfect book for my class. It is in great condition!

Brand new and very neatly packaged!!!!!! Very pleased!
