Casarett & Doull's Toxicology: The Basic Science Of Poisons, Eighth Edition

Synopsis

The most trusted all-in-one overview of the biomedical and environmental aspects of toxicology--NOW more complete, up-to-date, and in full color! A Doody's Core Title for 2017! NEW to the Eighth Edition FULL-COLOR design to allow for a clearer interpretation of the basic components of toxicology featured throughout the text EXPANDED tables, illustrations, and other visuals are updated with state-of-the-art standards that makes this edition even more current and relevant DVD with image bank features all tables and illustrations from the text in presentation-ready format NEW CHAPTERS include "Toxic Effects of Calories" and "Toxic Effects of Nanoparticles" The world's leading and most authoritative textbook on poisons has more to offer students, toxicologists, and pharmacologists than ever before. Now in full color, and thoroughly revised, the eighth edition of Casarett & Doull's TOXICOLOGY: The Basic Science of Poisons not only delivers a comprehensive review of the essential components of toxicology, it offers the most up-to-date, revealing, and in-depth look at the systemic responses of toxic substance available anywhere. Combined with the latest thinking by the field's foremost scholars plus solid coverage of general principles, modes of action, and chemical-specific toxicity, this landmark text continues to set the standard for toxicology references.

Book Information

Series: Casarett & Doull's Toxicology

Hardcover: 1454 pages

Publisher: McGraw-Hill Education / Medical; 8 edition (June 19, 2013)

Language: English

ISBN-10: 0071769234

ISBN-13: 978-0071769235

Product Dimensions: 8.9 x 2 x 11 inches

Customer Reviews

Curtis Klaassen, PhD Distinguished Professor and Chair Department of Pharmacology, Toxicology,

As someone who has had several editions of this textbook, I can easily state this edition is the best so far. This is mostly due to the change of adding in the color tabulations (on the side of the text book making it much easier to find sections) and the addition of multicolor graphs, illustrations, tables, etc. The 7th edition had 2 color for everything - green and black. For giving presentations, the DVD with full presentation graphics will prove to be a real time saver. Otherwise the book continues to be an excellent reference for anyone that needs a current standard for toxicology. The text is organized well, it has an excellent index and is exceedingly well referenced as would be expected. The new sections - regulatory toxicology and nanotoxicology are needed in the expanding field and Toxic Effects of Calories looks to be an interesting read. For a scientific work, pricing is actually pretty reasonable and the editions only come out about every 7 years. Definitely the book you want on your desk, or available electronically if you have toxicologic questions that you need to answer.

A must for any Toxicology student! Being a PhD student myself, this is my go to. It gives you layered information by detailing how systems and classes of compounds work. It details single molecules/compounds when they are the classics or notable outliers. The information is very technical but readable nonetheless. Chapters are outlined in a sensible manner and if a section within a chapter doesn't apply to what you need/want to know you can jump past without feeling like you've done so. Bottom line: if you're looking for a book to look in the index for specific toxins like a dictionary and get a readout on page 933, this isn't it. Try Book of Poisons by Serita Stevens and Anne Bannon

I purchased this book just to learn more about the fate of pesticides in the environment. The book is great for providing an overview of toxicology and discussing so many issues relating to measuring the effects of chemicals (all kinds) in the environment and in animal and human systems. If you really want to know how our bodies are affected by chemicals in our food or in the environment, spend time with a book like this instead of on Google. You will come away with much more accurate knowledge.

The expanded version of C & S Essentials of Toxicology. Lots of info.

I have this for class. It has far more information than any human being really needs to know about toxicology. So much info it hurts my head to read it. But if you are a work in the subject you will terasurethe book

Thanks!

This text is required for preparing for and taking the certification exam for the American Board of Toxicology. This is our designated "Bible." with this textbook, I am looking forward to acing my final re-certification exam.

A very in-depth course in Toxicology. It covered all areas that I needed information and then some! Is a great resource for my library. Was worth the \$50 purchase.
